Re: TSCA PCB Coordinated Approval Application  
Fort James Operating Company, Green Bay West Landfill Cell 13A

Dear Mr. Toma:

This letter is in response to your request, on behalf of Georgia Pacific Corporation, to suspend our review of the Toxics Substances Control Act (TSCA) Coordinated Approval application submitted by Fort James Operating Company. The application, which consisted of submissions dated February 10 and April 14, 2006, was for the use of Cell 13A at the Green Bay West Landfill as a disposal site for polychlorinated biphenyl (PCB) contaminated sediments dredged from the Fox River remediation project.

The Federal PCB regulations at 40 C.F.R. Part 761 does not have a provision for suspending requests for approval to dispose of PCBs. As a result, we have decided to terminate our review of the Coordinated Approval application and close the related files.

The termination of our review does not preclude Fort James from reapplying for approval to use Cell 13A as a disposal site for PCB contaminated material. If Fort James wishes the United States Environmental Protection Agency to reconsider the use of Cell 13A as a PCB disposal site, it will have to submit a new application. For any new application submitted by Fort James, we will provide an opportunity for public comment as part of the approval process.

If you have any questions regarding the information in this letter, please contact Jean Greensley of my staff at (312) 353-1171.

Sincerely,

Margaret M. Guerriero, Director  
Waste, Pesticides and Toxics Division
